

TECHNICAL INFORMATION

This general purpose PVA is a medium viscosity polymer emulsion of Vinyl Acetate. It is a fully compounded product ready to use. The emulsion has a good wet tack, reasonable open time and is mechanically stable. The emulsion is stable for extended periods of time although there will be an increase in viscosity at low shear with time.

The product is suitable for interior use on a range of substrates, and can also be diluted for use as a sealant for absorbent surfaces eg. Plaster walls.

PHYSICAL DATA:

Polymer type	Vinyl acetate, Polyvinyl Alcohol.
Total Solids	20 ± 2%
Free Monomer Content	Less than 0.2%
Specific Gravity @ 25 °C Typical Value	approx 1.05
Freeze Thaw Stability	Good
Forming Temperature	2-5°C
Viscosity Brookfield DV+1 4/20/20 °C.	65 poise

V2 - Jan 2016
